<p data-bbox="338 495 525 629">28 頁 図 2-10</p>	<p data-bbox="692 260 1288 536">「娘レジア (母レジア)」 を 「レジア (母レジア)」 に訂正いたします。</p>  <p>The diagram illustrates the life cycle of a parasite. It begins with an '卵虫' (egg), which develops into a 'ミランジウム' (Miracidium). This stage then becomes a 'スポロシスト' (Sporocyst). A vertical dashed line indicates a transition point. Following this, the sporocyst produces more 'スポロシスト' (Sporozoites), which are shown as small, oval-shaped organisms. The final stage is labeled '娘レジア (母レジア)' (Daughter sporozoite (mother sporozoite)), which is shown as a larger, more complex organism. Arrows indicate the progression from left to right, and a thick horizontal line follows the final stage.</p>
